DOUBLE PIPES

4:104

Straight pipes for cut-to-length

PN 16/PN25

Cut-to-length pipes are manufactured in all dimensions, as given in section 4:101. In these pipes the steel service pipe is covered by a plastic foil every second metre along the entire pipe length. This arrangement allows easy removal of the foam from the steel in the sections. These sections of the pipe are indicated on the outside casing pipe. Whole lengths or parts of pipes cut-to-length can be installed at any place in a district heating distribution system.

ARTICLE NO. 1513, 1613, 1713 (12m)

Double pipe DN	Max. deflection		Anm.
	L = 12 m	L = 16 m	
25 - 65	30°		To be bent at installation site
50 - 80	30°		Bent at Powerpipe works
100	30°	20°	Bent at Powerpipe works
125 - 150	30°	25°	Bent at Powerpipe works
200	25°	32°	Bent at Powerpipe works

Accuracy of manufacture DN 2*80 - 2*200 +/- 2°

Steel service pipe In the manufacturing of curved pipes welded steel pipes are used.
For manufacturing reasons alarm wires are placed in the neutral position.

Article No..

1523-DN-000-000 (STANDARD)

1623-DN-000-000 (DOUBLE+)

An example of how to order:

Curved Double pipe L = 12m with dim DN 2*100, standard,
has Article No. 1523-100-000-000.

Deflection shall be stated in a separate line of text.

Curved pipes

Deflection versus design radius

PN 16/PN25

CORRELATION BETWEEN DEFLECTION AND DESIGN RADIUS

Deflection	Design radius L = 12 m	Deflection	Design radius L = 12 m
1°	690	21°	33,0
2°	345	22°	31,0
3°	230	23°	30,0
4°	170	24°	29,0
5°	140	25°	28,0
6°	115	26°	27,0
7°	98	27°	26,0
8°	86	28°	25,0
9°	76	29°	24,0
10°	69	30°	23,2
11°	62	31°	22,5
12°	57	32°	21,8
13°	53	33°	21,1
14°	49	34°	20,5
15°	46	35°	20,0
16°	43	36°	19,4
17°	40	37°	18,9
18°	38	38°	18,4
19°	36	39°	18,0
20°	34	40°	17,5

The pipes cannot be bent along its entire length. At each pipe end a straight part will remain, which shall be approximately 2 meters in length.

This deviation from an ideal curved pipe radius is to be compensated when installing the pipe by making the pipe trench approximately wider at center.

The widening should be ~200 mm at deviation < 10°

The widening should be ~500 mm at deviation > 10°

Curved pipes

Elastic radius

PN 16/PN25

ELASTIC RADIUS

Dimension	Elastic radius m	Deflection/ 12 m
25	15	45°
40	21	31°
50	27	25°
65	34	20°
80	40	17°
100	52	13°
125	63	11°
150	76	9°
200	98	7°

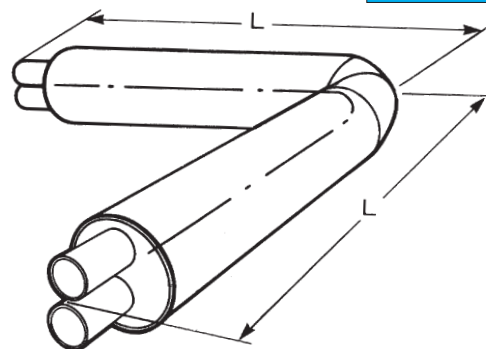

The above table shows the elastic radius which is the maximum radius or deflection that can be allowed without permanent deformation in the steel pipe.
