**POWERPIPE**

MADE IN SWEDEN

### THE POWER PEOPLE

We are proud of our various piping systems with all their peripherals. That is the foundation on which our company stands. But it is our employees who make up our main competitive advantage. Their expertise and experience, combined with our flexible production apparatus, allow us to customise products and manufacturing. So your orders are delivered **on time** to the **right place** and with the **right quality**.

### YOU ARE ALWAYS WELCOME!

Would you like to know us better or see how we manufacture our pipes? Call or email us, and we will book a visit. See contact information on the back of this folder.

# Reliable district heating with minimal energy loss

Powerpipe manufactures pre-insulated district heating pipes in Sweden and has provided satisfied customers in several countries with reliable and cost-effective district heating systems since 1986.

Our vacuum-insulated district heating pipes and efficient peripherals significantly reduce energy losses compared to traditional technology. Lower heat emissions, in turn, mean lower greenhouse gas emissions because a smaller amount of energy is required for the desired heating. And since the vacuum panel tubes also have 25% smaller outer dimensions, the excavation cost is reduced for new installation.

FROM  
STANDARD...  
...TO  
CUSTOMISED  
SOLUTIONS

”It is always advantageous to use domestic suppliers because the lead times will be better than if the pipes are manufactured further away.”

*Niklas Lindvall, Project Manager Nybro Energi*

### QUALITY & ENVIRONMENTAL CERTIFICATION

Powerpipe is certified by Bureau Veritas in accordance with the international standards ISO 9001 & ISO 14001. In addition, RISE annually performs various tests on district heating pipes in accordance with the requirements of SS-EN 253.

Powerpipe has always worked to

# g systems SS

FLEXIBLE,  
STRONG,  
SMALL, AND  
LARGE!

Powerpipe combines the speed and flexibility of a small organisation with the strength of the large Kingspan group.

We are passionate about the planet and the climate change. Our products have influence, and we take pride in delivering quality products on time. We are a fast-paced organisation with short decision paths and have the strength to act fast to solve your challenges.

develop products with as little environmental impact as possible. In the early 1990s, we were the first to offer freon-free PUR foam for district heating pipes. As a result, Sweden became the first nation in the world on July 1, 1991, to legislate for a ban on the import, manufacture, and use of freon-based foam for district heating pipes.

## SUPER-INSULATED VACUUM PANEL TUBES

INNOVATION

**Reduces heat losses\*  
by 30 % overall  
or 50 % for the front line**

Super-insulated vacuum panel tubes are our solution for a greener planet. It is a relatively new innovation, especially suited for straight twin tubes, which sets new standards for insulation efficiency. A smart way to save energy, the environment, and money. The product is patented and developed in collaboration with Chalmers University of Technology in Gothenburg and RISE Research Institutes of Sweden.

\*Calculated on forward/return/ambient temperatures at 85°C / 55°C / 5°C

REDUCE HEAT  
LOSSES BY

30%

## MOST SUSTAINABLE MANUFACTURER OF PRE-INSULATED DISTRICT HEATING PIPES

TOP RATING

SINFRA, Sweden's largest purchasing organisation for district heating, conducted a sustainability audit in 2021.

**Powerpipe received a top rating of 4.93,** compared to the average of 3.70. It makes us proud but not content.

Constant development is part of our DNA.

## EVEN COMPLEX PROJECTS START WITH A SIMPLE CONVERSATION

Delivering entire district heating distribution systems requires knowledge and experience. This is what our solution-oriented team in Goteborg has plenty of.

We find the optimal solution for you with a focus on customer service, flexibility, and speed.

Give us a call – and we'll take it from there. .
